

Fit-Buddy

6. Project Testing – Performance / Functional Verification

Automated Verification Result

The supplied fitbuddy/test_api.py suite was executed locally against the FastAPI application. Result: ALL 4 SCENARIOS PASSED SUCCESSFULLY.

Scenarios

- Scenario 1 – Generate workout plan and nutrition tip: PASSED
- Scenario 2 – Submit feedback and update workout plan: PASSED
- Scenario 3 – Request nutrition/recovery tip: PASSED
- Scenario 4 – Admin dashboard / view all users: PASSED

Additional Check

Server health check at <http://127.0.0.1:8000/> returned HTTP 200.

Limitation

This was functional verification, not a formal load benchmark. No throughput, latency percentile, CPU, memory, or concurrent-user benchmark was measured. Gemini live-model behavior was not benchmarked in this run because no API key was configured in the execution environment; the application fallback path was exercised.

Prepared from the supplied Fit-Buddy project ZIP and team information. Technical claims are based on the inspected source code and README; no unsupported benchmark numbers are added.
