

Technology Stack

Date	30 September 2026
Team ID	6ab3ec17b5170a9b58b3a66b
Project Name	Fit-Buddy
Maximum Marks	2 Marks

Define Your Technology Stack:

Identify the programming languages, frameworks, databases, front-end tools, back-end tools, and APIs that you will use to build your solution. A well-chosen technology stack ensures that your application is scalable, maintainable, and aligned with your project requirements.

Fill out the table below to detail the specific technologies chosen for each component of your architecture and provide a brief justification for your choice.

Technology Stack Details

S.No	Architecture Component / Layer	Technology Chosen	Justification / Purpose
1	Frontend / Client-Side <i>(e.g., React, Angular, HTML/CSS)</i>	HTML, CSS, JavaScript	Browser-based interface with simple responsive form and readable workout results using Jinja2 templates.

2	Backend / Server-Side <i>(e.g., Node.js, Python/Django, Java)</i>	Python + FastAPI	Handles API routing, validation and user-input processing; suitable for the project's modular Python backend.
3	Database / Data Storage <i>(e.g., MySQL, MongoDB, PostgreSQL)</i>	SQLite + SQLAlchemy	Provides local persistence for user profiles, original/updated plans and nutrition/recovery information.
4	Cloud / Hosting / Deployment <i>(e.g., AWS, Azure, Heroku, Docker)</i>	Uvicorn (local)	Runs the FastAPI application locally for deployment preparation, testing and verification.
5	Version Control & CI/CD	[Information Required]	No specific version-control or CI/CD tool is identified in the provided project context.

	<i>(e.g., GitHub, GitLab, Jenkins)</i>	[Information Required]	No specific CI/CD tool is identified in the provided project context.
6	Third-Party APIs / Other Tools <i>(e.g., Stripe, Twilio, Google Maps)</i>	Google Gemini API	Generates personalized 7-day workout plans and nutrition/recovery guidance, and revises plans using user feedback.
