Project Title	Fit-Buddy
Maximum Marks	5 Marks

Project Proposal (Proposed Solution) report

Fit-Buddy is a web-based AI fitness application that generates personalized 7-day workout plans and nutrition/recovery guidance based on user fitness details, goals and selected intensity. Users can submit feedback to refine plans while original plans are preserved.

Project Overview	
Objective	To provide accessible, structured and personalized workout planning using Generative AI based on user fitness information, goals and intensity.
Scope	Covers user input capture, AI-generated 7-day plans, nutrition/recovery guidance, feedback-based plan refinement, persistence and coach/admin viewing.
Problem Statement	
Description	Generic workout plans may not reflect individual goals, body information, intensity or changing needs, making it difficult to maintain a suitable routine.
Impact	Provides a structured personalized routine, nutrition/recovery guidance, and feedback-based revision while retaining the original plan.
Proposed Solution	
Approach	Uses FastAPI/Jinja2 to collect and validate inputs, calls Google Gemini for workout and nutrition generation, and stores results in SQLite through SQLAlchemy.
Key Features	- Personalized 7-day workout plan generation.

	- Nutrition/recovery guidance. - Feedback-based workout refinement. - Original and updated plan storage. - Coach/admin dashboard.

Resource Requirements

Resource Type	Description	Specification/Allocation
Hardware		
Computing Resources	CPU/GPU specifications, number of cores	[Information Required]
Memory	RAM specifications	[Information Required]
Storage	Disk space for data, models, and logs	[Information Required]
Software		
Frameworks	Python frameworks	Python + FastAPI
Libraries	Additional libraries	Pydantic, SQLAlchemy, Jinja2
Development Environment	IDE	[Information Required]
Data		
Data	Source, size, format	User fitness inputs and generated plans stored in SQLite.
