Maximum Marks	3 Marks

Project Executable Files

This section requires submission of all executable and deployable files for your project. Ensure all files are properly organized, named, and uploaded to the specified submission platform. The evaluator must be able to run or deploy your solution using the provided files and instructions.

Step 1: Submission Checklist

S.No	Item to Submit	Submitted (Yes / No / NA)
1	Complete source code (all files and folders)	Yes
2	README / Setup Guide (instructions to run the project)	Yes
3	requirements.txt / package.json / dependency file	Yes
4	Database schema / seed files (if applicable)	Yes
5	Environment configuration file (.env.example or similar)	Yes
6	Deployed application URL (if hosted)	NA
7	APK / Executable binary (if applicable for mobile/desktop apps)	NA
8	Dockerfile / Containerization config (if applicable)	NA
9	Test files and test results	Yes
10	Demo video or walkthrough (if required)	Yes

Step 2: File / Folder Structure

Provide an overview of your project's file and folder structure below:

fitbuddy/

app/	- FastAPI application modules
main.py	- application entry point
routes.py	- application routes
database.py	- SQLite / SQLAlchemy database access
schemas.py	- Pydantic schemas
gemini_generator.py	- Gemini workout generation
gemini_flash_generator.py	- Gemini nutrition/recovery tips
updated_plan.py	- feedback-based plan update
templates/	- Jinja2 HTML templates
*.html	- index, result and all-users pages
test_api.py	- API testing
requirements.txt	- Python dependencies
.env.example	- environment configuration template
README.md	- setup and run instructions

Step 3: Deployment / Access Details

Field	Details
Hosted / Deployed URL	Not hosted / local deployment
Login Credentials (Demo)	Not required
Platform / Hosting Provider	Local deployment with Uvicorn
Repository Link	https://github.com/lingeshwaranss/Fit-Buddy.git
Demo Video Link	https://drive.google.com/drive/folders/1kkW0nGt5YK2zUHWrvzS4sgOxkZuAa1Kc

Step 4: Run Instructions

Provide clear, step-by-step instructions for the evaluator to run your project locally:

Pre-requisites:

Python environment, project dependencies, and a Google Gemini API key configured through environment settings.

Step 1: Clone/download the Fit-Buddy repository.

Step 2: Install dependencies: `pip install -r requirements.txt`

Step 3: Configure the Gemini API key using the `.env` environment configuration.

Step 4: Start the FastAPI application with Uvicorn.

Step 5: Open the local application in a browser and use the Fit-Buddy form.

Step 5: Known Issues / Limitations

S.No	Known Issue / Limitation	Workaround / Status
1	Gemini API key is required for AI generation.	Configure the API key in the environment settings.
2	No hosted/deployed URL is provided.	Run the application locally with Uvicorn.
3	SQLite is used for local user and plan storage.	Use the local project database for review and testing.
